DETAILED ACTION

Specification

1. The specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Claim Objections

2. Claims 15, 21 and 28 objected to because of the following informalities:
 - In Claim 15:
 - In line 1 —of—should be deleted.
 - In line 6-8, it is not clear what the options of placing the oscillating unit are.
 - In lines 15-16, it is not clear what the applicants want to claim.
 - In claim 21, 'preferably...' is considered as a limitation within a limitation and therefore indefinite.
 - In claim 28, 'for instance a temperature sensor...' is also considered a limitation within limitation, and therefore indefinite.

Appropriate correction is required.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

4. Claims 15-28 are rejected under 35 U.S.C. 102(b) as being anticipated by Seale (US 5533381).

Seale discloses an apparatus for monitoring a predetermined fill level and/or for determining the density or viscosity of a medium in a container (abstract), comprising: an oscillating unit (piezoelectric oscillators); a driver/receiver unit; feedback electronics; and an evaluation unit, wherein: said oscillating unit is placed according to one of the following: at the height of the predetermined fill level, and such that it reaches to a defined immersion depth into the medium, said driver/receiver unit excites said oscillating unit to oscillate with a predetermined oscillation frequency via said feedback electronics, said evaluation unit detects the reaching of the predetermined fill level on the basis of a frequency change and/or an amplitude change of the oscillation of said oscillating unit, said evaluation unit determines the density or the viscosity of the medium on the basis of a change of the oscillation of the oscillating unit, electronics, a microprocessor (720) is provided, which corrects the phase of said feedback electronics over a predetermined frequency bandwidth in such a manner that the sum of the phases of said feedback electronics and said microprocessor follows a predetermined function $f(v)$ (see column 12, lines 37-64 and column 13-14).

Regarding claims 16-28, Seale anticipates the invention as disclosed in columns 12-14.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See PTO-892.
